

Twenty-one percent of the student body in fall 2016 identified as students of color (represented by the orange line in the graphs).

Twenty-two percent of the student body in fall 2017 identified as students of color.

Each graph show the percent of students of color in each work department out of the students allocated in that work department, one graph for fall 2016 and one for fall 2017.

For example, in fall 2016, 14% of the students allocated to work in the Academics department were students of color. In fall 2017, that percentage was 10%. The Academics department is aware of that trend and is working on the issue. However, when you look at the Administration department, in fall 2016 the percentage was 23% of the allocation was students of color and for fall 2017 that had increased to 31%.
